Task 1: Connect, Load, Transform and Clean the data set 3
Task 2: Create Calculated Measures and Fields 6
Task 3: Build Visualizations 10
Task 4: Interactive Dashboard Visuals and filters 31
Task 5. Published Report View 38

Introduction

The objective of this assignment was to develop hands-on experience in Business Intelligence using **Tableau Desktop and Tableau Public** by analyzing an HR dataset. The project focused on transforming raw employee data into interactive dashboards that support strategic Human Resource decision-making.

The HR manager required an interactive dashboard with both **high-level summaries and detailed employee-level records**. The dashboard was structured into three main sections:

1. Overview
2. Demographics
3. Income Analysis

The project involved loading and transforming HR datasets, creating calculated fields, designing multiple visualizations (bar charts, maps, scatter plots, heat maps, area charts), building an interactive dashboard, and publishing the final report to the cloud as part of a professional portfolio. This assignment strengthened practical skills in data preparation, calculated field creation, visualization design, dashboard storytelling, and cloud publishing workflows using Tableau.

The key objectives of the assignment were to:

1. Understand the HR business problem and reporting requirements
2. Load and transform HR datasets in Tableau
3. Create calculated measures and dimensions
4. Build various visualizations (bar charts, maps, scatter plots, heat maps, area charts)
5. Design an interactive dashboard for HR decision-making
6. Publish and share the dashboard on Tableau Public

Tasks Completed

The assignment began by connecting the HR dataset to Tableau Desktop. The data was reviewed in the Data Source tab to ensure correct data types, field naming consistency, and structural accuracy.

Data preparation involved cleaning categorical variables such as gender, department, education, and job roles. Date fields were validated to support time-based analysis, and numerical fields such as salary and age were confirmed for aggregation.

Several calculated fields were created to support analysis, including metrics such as average salary, employee count, age groups, salary bands, and departmental distribution percentages. These calculated fields enabled dynamic and reusable metrics across multiple visualizations.

Multiple visualizations were created to support different analytical perspectives:

- Bar charts for department distribution
- Area charts for hiring trends
- Scatter plots for salary vs age analysis
- Heat maps for education vs salary
- Maps for employee location distribution

An interactive dashboard was then designed with three main sections (Overview, Demographics, Income Analysis), including filters for department, gender, education level, and position. A detailed employee table was included with dynamic filtering capabilities.

Finally, the dashboard was published to Tableau Public and the link was added to the project portfolio.

Link to Code:
https://public.tableau.com/views/HRdasboard_17712606319680/HRDetails?:language=en-GB&publish=yes&:sid=&:redirect=auth&:display_count=n&:origin=viz_share_link

Conclusion

This assignment provided practical exposure to end-to-end Business Intelligence development using Tableau within an HR analytics context. By transforming raw employee data into structured visual insights, the project demonstrated how data visualization tools support strategic HR planning and workforce management.

The project strengthened skills in data cleaning, calculated field creation, visualization design, dashboard storytelling, and cloud publishing. The completed Tableau dashboard serves as a strong addition to my professional analytics portfolio and showcases my ability to translate business requirements into actionable data insights.

Screenshots of the project

The screenshots show the key stages of the HR Tableau project, including data loading and preparation, calculated field creation, visualization development, and the final interactive dashboard.

Task 1: Connect, Load, Transform and Clean the data set

CONNECT, LOAD THE DATA SET
What:
Open Tableau Desktop → Connect to the HR dataset → Load into Data Source tab.

Why:
Loading the dataset correctly ensures Tableau recognizes fields properly (dimensions vs measures), which affects visualization accuracy.

TRANSFORM AND CLEAN THE DATA SET
What:

- Rename unclear column names
- Check data types (salary = number, hire date = date)
- Remove null or inconsistent values
- Create aliases if needed

Why:
Clean data prevents errors in aggregation, ensures reliable KPIs, and improves dashboard professionalism.

Task 2: Create Calculated Measures and Fields

What:

Create calculated fields such as:

- Employee Count → COUNT([Employee ID])
- Average Salary → AVG([Salary])
- Age Group (e.g., 20–30, 31–40, etc.)
- Salary Band
- Department % Contribution

Why:

Calculated fields allow dynamic, filter-responsive metrics that update automatically based on user interaction.

Task 3: Build Visualizations

1. Bar Chart
What: Employees by Department
Why: Shows workforce distribution clearly.
2. Area Chart
What: Hiring trend over time
Why: Identifies growth or decline patterns.
3. Scatter Plot
What: Salary vs Age
Why: Identifies correlations or outliers.
4. Heat Map
What: Education Level vs Salary
Why: Reveals patterns between education and income.
5. Map
What: Employee distribution by location
Why: Supports geographic workforce planning.

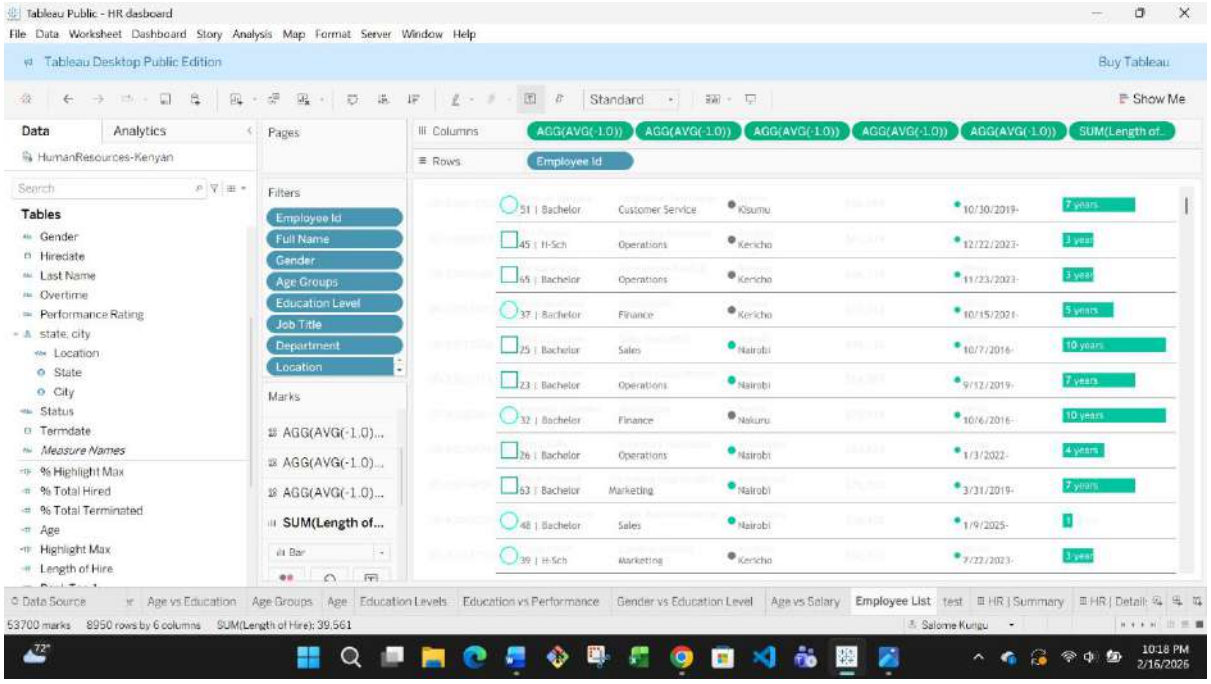
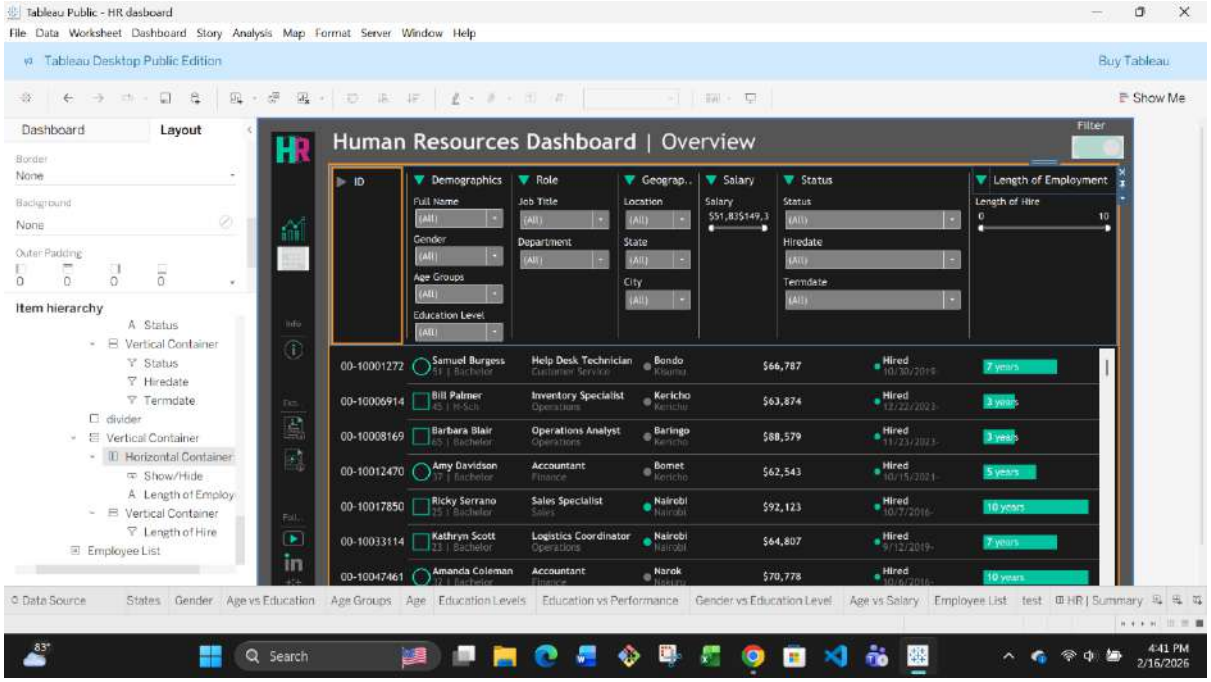
Employee Records View

- Provide a comprehensive list of all employees with necessary information such as name, department, position, gender, age, education, and salary.



- Users should be able to filter the list based on any of the available columns.



Task 4: Interactive Dashboard Visuals and filters

DASHBOARD VISUALS:

What:

Combine sheets into one dashboard divided into:

1. Overview

KPIs: Total Employees, Avg Salary, Gender Ratio

2. Demographics

Age distribution, Gender breakdown, Education levels

3. Income Analysis

Salary by department, salary distribution, correlation charts

Add filters (department, gender, education, position).

Why:

A structured dashboard ensures clarity, supports executive decision-making, and avoids clutter

INTERACTIVE FILTERS

What:

- **Add filters and parameter controls**
- **Enable highlight actions**
- **Add tooltips**
- **Make charts clickable**

Why:

Interactivity allows HR managers to explore the data without needing technical skills.

Task 5. Published Report View

Saving and sharing the final Tableau dashboard.

What: The completed HR dashboard was published to Tableau Public, and the project link was added to my portfolio for easy access and sharing.

Why: This ensured the project could be reviewed online and showcased as part of my professional data analytics portfolio.
